

Fluted Silicone Drains

**Fluted Silicone Drains for
Bellovac[®] and Exudrain[®]
Wound Drainage System**

For safe and easy drainage

MEDI PLAST

Fluted Silicone Drains

Enhanced patient comfort

Fluted drains offer enhanced comfort postoperatively both at rest, when coughing and on removal.^{1,2} When used after mastectomy surgery fluted drains reduce the incidence of seroma formation.³ Furthermore they have successfully been used after gastric

bypass surgery, where they have allowed for earlier diagnosis of post-operative complications.⁴

Our fluted silicone drains are easily integrated with Medioplast wound drainage systems. The drain fluid can

then always remain safely enclosed within the system, minimising the risk of patient or staff contamination, even during emptying and reactivation.

Fluted Silicone Drains

For post-operative wound drainage. Well suited for use together with wound drainage system: Bellovac® and Exudrain® (Note: Not Bellovac® ABT).

Round Fluted Drains

Ref No		Product
68460	15	Fluted Silicone Drain FG10 with trocar
68461	15	Fluted Silicone Drain FG14 with trocar
68462	15	Fluted Silicone Drain FG18 with trocar

Flat Fluted Drains

Ref No		Product
68463	15	Fluted Flat Silicone drain, 7 mm/FG 14 with trocar
68464	15	Fluted Flat Silicone drain, 10 mm/FG 14 with trocar

All Fluted Silicone Drains are delivered with connector
